COMFORT IN EXPERIENCING EMOTIONS

A good film can transfer viewers to a completely different reality... provided they feel comfortable and are able to focus entirely on the things that happen on the silver screen. Therefore, it is crucial to furnish cinema halls with comfortable and durable armchairs with the right accessories.

The very sight of a wide armchair covered with soft upholstery makes a pleasurable first impression on cinema-goers. Sitting on it gives them most possible comfort all the way until the last minute of the film. The armchair backrest ensures ergonomic support for the users back and allows them to make small natural body movements. Other important features of a cinema armchair are a seat of the right hardness and accessories, such as a cup holder, within the users reach.

Thanks to our 20 years of experience in equipping cinemas, we know how to create an ideal cinema seat. We offer different armchair options that allow for choosing products and details adjusted to our clients individual preferences.

We take responsibility for the entire equipment process from defining our clients needs to carrying out quick and efficient assembly that hinders the cinemas functioning to the least extent possible.

DYNAMIC SOUND SYSTEM

Our goal is to provide viewers with the best comfort possible, so we have developed an innovative range of dynamic seating systems based on our long-term experience in ergonomic seating development and protected by international patents.

To relax completely, the user needs the right body support, the optimal back position and a seat and footrest that ensure maximum freedom of movement. The dynamic sound system lets viewers experience

movie scenes packed with special effects better than ever before. Dynamic Comfort Systems provide the viewer with maximum comfort and great pleasure, even at cinemas with limited space.
